

Introduction to Backend Development and Deployment

Via NodeJS and Azure

Session 4 on 20/04/20

Microsoft [Student Partners](#)

About this Session

Topic to be covered

- Use Case for REST API
- What's Cloud
- Introduction to Azure
- Azure App Service
 - Introduction
 - Deploying NodeJS App
- Azure VM
 - Introduction
 - Deploying various services on VM

Use Case of REST API

What is cloud?

Cloud Computing?

Computers can fly now?

**WHOA. SO, YOU'RE SAYING
CLOUD COMPUTING...**

**IS NOT THE FLUFFY WHITE
THING IN THE SKY?**

THERE IS NO CLOUD

**ONLY SOMEONE ELSE'S
COMPUTER**

CLOUD COMPUTING

Virtual
Desktop

Software
platform

Servers

Applications

Storage/Data

Router

Why Use Cloud?

Speed

- Faster than Traditional Application Development

Scale

- Scale out Quickly
- Provide Global Scale

Economics

- Lower Cost

What is Azure?

- A complete cloud platform
 - Host existing applications/services
 - Host new applications/services
 - Enhance On-Premise applications/services
- Easy to Scale
- High availability
- Easily manageable services
 - Many ways to manage Azure Services
 - Including the Azure Portal, CLI, REST APIs etc.

Types of Azure Services

Customer Managed

Infrastructure as a Service
(IaaS)

Platform Managed

Platform as a Service
(PaaS)

Code Only

Serverless

Azure App Service - Web Apps

- Service for hosting apps
 - Web Apps, APIs, Mobile backends
- Supports many languages
 - .Net, .Net Core, Java, Ruby, Node.js, PHP, Python
- Run on Linux or Windows
- Easily Scalable
- Add DevOps capabilities
 - CD using VSTS, GitHub, BitBucket etc.

- Deploy virtual machines featuring up to 416 vCPUs and 12 TB of memory. Get up to 3.7 million local storage IOPS per VM. Take advantage of up to 30 Gbps Ethernet and cloud's first deployment of 200 Gbps InfiniBand.

Keep your budget in check with low-cost, per-second billing. You only pay for the compute time you use

Scale from one to thousands of VM instances in minutes with VM Scale Sets

Encrypt sensitive data, protect VMs from malicious threats, secure network traffic and meet regulatory and compliance requirements

Choose Linux or Windows. Deploy your own VM image or download images from the Azure Marketplace

Demo: Deploying NodeJS App on Azure VM

Repo: <https://github.com/ieeeditu/NodeJS-Azure-Deployment>

Enter following command after getting shell access of your Virtual machine:

1. `sudo apt-get update`
2. `sudo apt install nodejs`
3. `sudo apt install npm`
4. `git clone https://github.com/ieeeditu/NodeJS-Azure-Deployment`
5. `cd NodeJS-Azure-Deployment`
6. `node index.js`
